Module 1

Management of Invasive Plant Species

This module covers the general information and techniques the knowledge of which is required to manage invasive plant species effectively and safely. It is a requirement for taking any species specific identification and control module.

1 Invasive species, general information and impacts

- 1.1 Main ecological and economic impacts of invasive plant species
- 1.2 Important of controlling invasive plant species

2 Legislation

- 2.1 Most important legislation relating to the control, herbicide treatment and disposal of invasive plants
- 2.2 How legislation impacts on operators and clients

3 Site biosecurity

- 3.1 Primary pathways that facilitate the spread of invasive species offsite, onsite and around a site
- 3.2 Control methods that can be undertaken to prevent/reduce the spread of invasive species offsite, onsite and around a site.

4 Site inspection, risk assessment and monitoring

- 4.1 Information that must be collected during a site assessment and importance of that information
- 4.2 Stages of a risk assessment
- 4.3 RICS risk categories
- 4.4 Requirements of an invasive species distribution map
- 4.5 Importance of mapping in the context of invasive species control
- 4.6 List the requirements of monitoring visits

5 Control options

- 5.1 Options available for invasive species management
- 5.2 Importance of understanding species characteristic that influence control
- 5.3 Revegetation

6 Herbicide use

- 6.1 Main categories of herbicides (e.g. persistent, selective, systemic, etc.)
- 6.2 Importance of record keeping
- 6.3 Optimal condition of plants and timing of treatment when using herbicides
- 6.4 Distance from water bodies within which herbicide treatment is restricted
- 6.5 Process of attaining approval for herbicide use near water
- 6.6 Herbicides and adjuvants appropriate to use near water
- 6.7 Pros and cons of different herbicide application methods (e.g. foliar application, stem injection, etc)

7 Waste Management

- 7.1 Precautions relating to clearance of vegetation that may contain invasive plant material
- 7.2 Storing and disposing of cleared vegetation that might contain invasive plant material
- 7.3 Procedure for incinerating invasive plant material onsite
- 7.4 Benefits and constraints relating to onsite burial of invasive plant material
- 7.5 Benefits and constraints relating to onsite stockpiles
- 7.6 Depth requirements and precautions related in creating a void for burial
- 7.7 Disposal to landfill
- 7.8 Precautions that must be taken when transporting waste containing invasive plant material

8 Reports

- 8.1 Site assessment reporting
- 8.2 Requirements of a management plan
- 8.3 Requirements of update reporting
- 8.4 Requirements of completion reporting

9 Warranties, quoting, insurance and bonds

- 9.1 Important of providing work of sufficient quality that a guarantee can be provided
- 9.2 PCA memberships requirements for providing quotes
- 9.3 List the PCA exclusive offerings relating to Insured Guarantees (Remedial Work) and Bondpay.

Module 2

Identification and Control options for invasive plants: Japanese Knotweed

This module covers in detail the identification and control of Japanese Knotweed and provides basic information on other problematic invasive plant species.

1 Japanese Knotweed, ecology, impacts and identification

- 1.1 Biology and ecology of Japanese Knotweed and the various drivers and constraints on its spread, both in its native and introduced range
- 1.2 Impacts and risks associated with Japanese Knotweed in the natural and built environment
- 1.3 Positive impacts of Japanese Knotweed
- 1.4 Japanese Knotweed identification at all stages of its development, including rhizome
- 1.5 Identification of other Asiatic Knotweeds (including hybrids) and Russian Vine
- 1.6 Identification of native species that are frequently mistaken for Japanese Knotweed

2 Other Invasive plant species to be aware of

- 2.1 Main invasive plant species of which clients should be aware and options for their control
- 2.2 Main groups of invasive plants (e.g. fresh water aquatics, riparian invasive plants, etc)

3 Controlling Japanese Knotweed

- 3.1 Factors that must be considered when developing a management plan for Japanese Knotweed
- 3.2 Primary control methods that have a proven effectiveness for the control of Japanese Knotweed
- 3.3 Determining the best control option for different Japanese Knotweed infestation scenarios
- 3.4 Pros and cons associated with different control methods
- 3.5 Herbicides that have been shown to be effective on Japanese Knotweed
- 3.6 Optimal plant condition and timing relating to the use of different effective herbicides

- 3.7 Procedure of using stockpiles (bunds) to control Japanese Knotweed
- 3.8 Procedures of using screening (sifting) to control Japanese Knotweed
- 3.9 Procedures of using rhizome fragmentation and cultivation to control Japanese Knotweed
- 3.10 Japanese Knotweed specific requirements for onsite burial of plant material
- 3.11 Best practice for working with root barriers (geotextiles) in the context of controlling Japanese Knotweed
- 3.12 Japanese Knotweed specific requirements for landfill disposal of plant material
- 3.13 Japanese Knotweed specific requirements for vegetation clearance if the vegetation contains living Japanese Knotweed
- 3.14 Procedures of Japanese Knotweed winter cane removal
- 3.15 Biological Control and Japanese Knotweed

4 Developing a Japanese Knotweed Management Plan

- 4.1 Factors to consider when developing a Japanese Knotweed Management Plan
- 4.2 Determining the optimal control method
- 4.3 Practical group exercise to develop a management plan
