

Japanese Knotweed: On-Site Contamination and Cell Burial Strategies

This new addition to our training prospectus is aimed at contractors working in the Invasive Weed sector wanting to gain further knowledge on the use of geomembranes for on-site encapsulation and burial.

This one-day workshop will provide candidates with both theory and practical considerations to the design and implementation of geosynthetics/geomembranes both on-site and in the ground.

Candidates will have the opportunity to be hands on with the geomembrane products and actively work on cell design and construction. They will also spend time looking at the health and safety aspects when managing and implementing projects of this nature.

**CALLING ALL
TECHNICIANS!**

The Trainer

Neil Salvidge has been working within the geomembrane sector for many years and has worked with various containment, landfill and geomembrane installations worldwide.

Along with offering training, Neil is also an NVQ specialist assessor and Internal Quality Advisor (IQA) for various disciplines within the construction sector.
